

Cleeve School

Cleeve School went through a major transformation with the remodelling and new build extension to the School and Middleton Consultancy's **Tim Sluman** was a key member of the Site Project Team.

Construction of a New Science, Music, and Lab extensions to the school valued at £10m were completed on time and also included some remodelling to the existing School.

The 2500sqm extension forms the second phase of works and will house new Science, Music, Admin and Learning Resources.

The Project team worked closely with the school to provide innovative teaching spaces which challenge the way in which subjects are taught. An example of this is the large laboratory area, which reflects both the changing science curriculum and the school's innovative approach.

The building itself will also be utilised as a teaching tool with items such as a glass lift with the mechanisms exposed, an ETFE roof, Photovoltaic cells and rainwater harvesting.
